

Parametric SA Practice

2003 AP[®] CALCULUS BC FREE-RESPONSE QUESTIONS

2. A particle starts at point A on the positive x -axis at time $t = 0$ and travels along the curve from A to B to C to D , as shown above. The coordinates of the particle's position $(x(t), y(t))$ are differentiable functions of t , where $x'(t) = \frac{dx}{dt} = -9\cos\left(\frac{\pi t}{6}\right)\sin\left(\frac{\pi\sqrt{t+1}}{2}\right)$ and $y'(t) = \frac{dy}{dt}$ is not explicitly given. At time $t = 9$, the particle reaches its final position at point D on the positive x -axis.
- At point C , is $\frac{dy}{dt}$ positive? At point C , is $\frac{dx}{dt}$ positive? Give a reason for each answer.
 - The slope of the curve is undefined at point B . At what time t is the particle at point B ?
 - The line tangent to the curve at the point $(x(8), y(8))$ has equation $y = \frac{5}{9}x - 2$. Find the velocity vector and the speed of the particle at this point.
 - How far apart are points A and D , the initial and final positions, respectively, of the particle?

1. An object moving along a curve in the xy -plane has position $(x(t), y(t))$ at time t with

$$\frac{dx}{dt} = \cos(t^3) \text{ and } \frac{dy}{dt} = 3\sin(t^2)$$

for $0 \leq t \leq 3$. At time $t = 2$, the object is at position $(4, 5)$.

- Write an equation for the line tangent to the curve at $(4, 5)$.
- Find the speed of the object at time $t = 2$.
- Find the total distance traveled by the object over the time interval $0 \leq t \leq 1$.
- Find the position of the object at time $t = 3$.

1. An object moving along a curve in the xy -plane has position $(x(t), y(t))$ at time $t \geq 0$ with

$$\frac{dx}{dt} = 12t - 3t^2 \text{ and } \frac{dy}{dt} = \ln(1 + (t - 4)^4).$$

At time $t = 0$, the object is at position $(-13, 5)$. At time $t = 2$, the object is at point P with x -coordinate 3.

- Find the acceleration vector at time $t = 2$ and the speed at time $t = 2$.
- Find the y -coordinate of P .
- Write an equation for the line tangent to the curve at P .
- For what value of t , if any, is the object at rest? Explain your reasoning.

3. The figure above shows the path traveled by a roller coaster car over the time interval $0 \leq t \leq 18$ seconds. The position of the car at time t seconds can be modeled parametrically by

$$x(t) = 10t + 4 \sin t$$

$$y(t) = (20 - t)(1 - \cos t),$$

where x and y are measured in meters. The derivatives of these functions are given by

$$x'(t) = 10 + 4 \cos t$$

$$y'(t) = (20 - t) \sin t + \cos t - 1.$$

- (a) Find the slope of the path at time $t = 2$. Show the computations that lead to your answer.
- (b) Find the acceleration vector of the car at the time when the car's horizontal position is $x = 140$.
- (c) Find the time t at which the car is at its maximum height, and find the speed, in m/sec, of the car at this time.
- (d) For $0 < t < 18$, there are two times at which the car is at ground level ($y = 0$). Find these two times and write an expression that gives the average speed, in m/sec, of the car between these two times. Do not evaluate the expression.

1. A particle moves in the xy -plane so that its position at any time t , for $-\pi \leq t \leq \pi$, is given by $x(t) = \sin(3t)$ and $y(t) = 2t$.

- (a) Sketch the path of the particle in the xy -plane provided. Indicate the direction of motion along the path. (Note: Use the axes provided in the test booklet.)

- (b) Find the range of $x(t)$ and the range of $y(t)$.
- (c) Find the smallest positive value of t for which the x -coordinate of the particle is a local maximum. What is the speed of the particle at this time?
- (d) Is the distance traveled by the particle from $t = -\pi$ to $t = \pi$ greater than 5π ? Justify your answer.

18/12

4. A particle moves in the xy -plane so that the position of the particle at any time t is given by

$$x(t) = 2e^{3t} + e^{-7t} \text{ and } y(t) = 3e^{3t} - e^{-2t}.$$

- Find the velocity vector for the particle in terms of t , and find the speed of the particle at time $t = 0$.
- Find $\frac{dy}{dx}$ in terms of t , and find $\lim_{t \rightarrow \infty} \frac{dy}{dx}$.
- Find each value t at which the line tangent to the path of the particle is horizontal, or explain why none exists.
- Find each value t at which the line tangent to the path of the particle is vertical, or explain why none exists.

Graph of f

5. Let f be a function defined on the closed interval $[0, 7]$. The graph of f , consisting of four line segments, is shown above. Let g be the function given by $g(x) = \int_2^x f(t) dt$.

- Find $g(3)$, $g'(3)$, and $g''(3)$.
- Find the average rate of change of g on the interval $0 \leq x \leq 3$.
- For how many values c , where $0 < c < 3$, is $g'(c)$ equal to the average rate found in part (b)? Explain your reasoning.
- Find the x -coordinate of each point of inflection of the graph of g on the interval $0 < x < 7$. Justify your answer.

2004 AP[®] CALCULUS BC FREE-RESPONSE QUESTIONS

3. An object moving along a curve in the xy -plane has position $(x(t), y(t))$ at time $t \geq 0$ with $\frac{dx}{dt} = 3 + \cos(t^2)$.

The derivative $\frac{dy}{dt}$ is not explicitly given. At time $t = 2$, the object is at position $(1, 8)$.

- (a) Find the x -coordinate of the position of the object at time $t = 4$.
- (b) At time $t = 2$, the value of $\frac{dy}{dt}$ is -7 . Write an equation for the line tangent to the curve at the point $(x(2), y(2))$.
- (c) Find the speed of the object at time $t = 2$.
- (d) For $t \geq 3$, the line tangent to the curve at $(x(t), y(t))$ has a slope of $2t + 1$. Find the acceleration vector of the object at time $t = 4$.

1. A particle moving along a curve in the plane has position $(x(t), y(t))$ at time t , where

$$\frac{dx}{dt} = \sqrt{t^4 + 9} \text{ and } \frac{dy}{dt} = 2e^t + 5e^{-t}$$

for all real values of t . At time $t = 0$, the particle is at the point $(4, 1)$.

- (a) Find the speed of the particle and its acceleration vector at time $t = 0$.
- (b) Find an equation of the line tangent to the path of the particle at time $t = 0$.
- (c) Find the total distance traveled by the particle over the time interval $0 \leq t \leq 3$.
- (d) Find the x -coordinate of the position of the particle at time $t = 3$.

2. Let f be a function having derivatives of all orders for all real numbers. The third-degree Taylor polynomial for f about $x = 2$ is given by

$$T(x) = 7 - 9(x - 2)^2 - 3(x - 2)^3.$$

- (a) Find $f(2)$ and $f''(2)$.
- (b) Is there enough information given to determine whether f has a critical point at $x = 2$?
If not, explain why not.
If so, determine whether $f(2)$ is a relative maximum, a relative minimum, or neither, and justify your answer.
- (c) Use $T(x)$ to find an approximation for $f(0)$. Is there enough information given to determine whether f has a critical point at $x = 0$?
If not, explain why not.
If so, determine whether $f(0)$ is a relative maximum, a relative minimum, or neither, and justify your answer.
- (d) The fourth derivative of f satisfies the inequality $|f^{(4)}(x)| \leq 6$ for all x in the closed interval $[0, 2]$. Use the Lagrange error bound on the approximation to $f(0)$ found in part (c) to explain why $f(0)$ is negative.

Taylor Series
Review

Short Answer AP Exam questions:

1987 - BC 5

The position of a particle moving in the xy -plane at any time t , $0 \leq t \leq 2\pi$, is given by the parametric equations $x = \sin t$ and $y = \cos(2t)$.

- Find the velocity vector for the particle at any time t , $0 \leq t \leq 2\pi$.
- For what values of t is the particle at rest?
- Write an equation for the path of the particle in terms of x and y that does NOT involve trigonometric functions.
- ~~Sketch the path of the particle.~~

1994 - BC 3

A particle moves along the graph of $y = \cos x$ so that the x -component of acceleration is always 2. At time $t = 0$, the particle is at the point $(\pi, -1)$ and the velocity vector of the particle is $(0, 0)$.

- Find the x - and y - coordinates of the position of the particle in terms of t .
- Find the speed of the particle when its position is $(4, \cos 4)$.

1995 - BC 1

Two particles move in the xy -plane. For time $t > 0$, the position of particle A is given by $x = t - 2$ and $y = (t - 2)^2$, and the position of particle B is given by $x = \frac{3t}{2} - 4$ and $y = \frac{3t}{2} - 2$.

- Find the velocity vector for each particle at time $t = 3$.
- Set up an integral expression that gives the distance traveled by particle A from $t = 0$ to $t = 3$. Do not evaluate.
- Determine the exact time at which the particles collide; that is, when the particles are at the same point at the same time. Justify your answer.

1989 - BC 4

Consider the curve given by the parametric equations $x = 2t^3 - 3t^2$ and $y = t^3 - 12t$.

- In terms of t , find dy/dx .
- Write an equation for the line tangent to the curve at the point where $t = -1$.
- Find the x - and y -coordinates for each critical point on the curve and identify each point as having a vertical or horizontal tangent.

1993 - BC 2

The position of a particle at any time $t > 0$ is given by $x(t) = t^2 - 3$ and $y(t) = \frac{2}{3}t^3$.

- Find the magnitude of the velocity vector at $t = 5$.
- Find the total distance traveled by the particle from $t = 0$ to $t = 5$.
- Find dy/dx as a function of x .
